CCDC Inject

INJECT NAME	Develop NMAP Configuration
INJECT ID	TOOL19T

INJECT DESCRIPTION:
A new team member is preparing to scan the external perimeter of the network, which is protected by a firewall. What is a suitable NMAP configuration to accomplish this in an efficient manner. The purpose is not to evaluate vulnerabilities, but simply find available services in either the TCP or UDP protocols in an efficient, time-constrained manner.

INJECT DELIVERABLE
Respond with a business memo that documents the command-line configuration for NMAP to efficiently and effectively check for available services that are exposed on the external perimeter of the firewall. For each common line option/token explain what it does and the rational for its use. Provide evidence of a working command.
