Team 6

Ohio State Univ

Category	Team Value	Evaluation
# of Injects Responded To	33%	Reponses were incomplete in some form
# of Injects Substantially Completed	33%	Reponses were incomplete in some form
Over all Score vs Best	45.67%	Performance in the lower half of Teams
Service Performance	Needs Improvement	
Red Team incident Detection	Weak	
Skills & Knowledge (Injects)	Needs Improvement	
Business Communications Skills	0	Response without substantial content
Cryptography Concepts & Configuration	N/A	The category wasn't used in the competition
Design Skills	0	Response without substantial content
Risk Assessment & Evaluation Skills	0	Response without substantial content
Policy & Legal Frameworks Skills	0	Response without substantial content
Networking Concepts and Configuration	N/A	The category wasn't used in the competition
Organizations Skills	N/A	The category wasn't used in the competition
Security Operations	30	Response without substantial content
Software Installation & Debugging	0	Response without substantial content
Linux System Administration Skills	N/A	The category wasn't used in the competition
Windows System Administration Skills	N/A	The category wasn't used in the competition
Server Administration	67	Reponses were incomplete in some form
Firewall Devices and Security Tool Skills	30	Response without substantial content
Virtualization Skills	N/A	The category wasn't used in the competition

Competition Overview

100 = Perfect Score	Competition Statistics		
Score Component	Average	Std Dev	Median
Services - NetLab	29.2	37.3	0.0
Incident Response (Red Team)	20.9	30.7	0.0
Skills & Knowledge (Injects)	16.7	27.0	0.0

The team demonstrated excellent capabilities in server firewall configuration, endpoint protection, and network scanning. Service availability was maintained at a moderate level, and network infrastructure knowledge was also evident. However, significant weaknesses were observed in incident reporting, perimeter firewall configuration, security logging, network management, and external service evaluation. The team should prioritize incident-response procedures, network monitoring, and comprehensive firewall management to develop a more balanced defensive capability.
