CCDC Inject

INJECT NAME	LAN Switch Question
INJECT ID	SOCS09A

INJECT DESCRIPTION:
The LAN management team has captured the following exchange between two switches and is puzzled as to what it means. See included file: DTP.pcapng. They are suspicious about this packet capture since it doesn't have any IP addresses to reference. What does this capture reveal about the network segment this was captured on. Fully decode the protocol for all the detail possible. Prepare a memo with your analysis.

INJECT DELIVERABLE
Respond with a business memo clearly:

- Explain why there are no IP addresses.
- Explain what protocol is represented here, what does it do, what does it represent.
- Provide a full decode of the protocol information - translate bit patterns/flags etc to meaningful information.
- What is unique about this segment connecting these two switches?
